

Operational Benefits

- > Covert and non-covert cellular interception
- > Rapid deployment
- > Extended operation up to 10 hours
- > Customizable to meet tactical and strategic needs
- > Silent operation
- > Low maintenance

Key Features

- > Passive and active cellular interception
- > 7-meter pneumatic mast (option)
- > Independent energy solution
- > Rechargeable battery bank

Cellular Interception Vehicle

Covert and rapidly-deployed interception of mobile voice & data

When interception of mobile signals in sensitive security zones is required, the YTS Cellular Interception Vehicle enables both passive and active cellular interception of voice and data communication traffic in an area of interest.

The YTS solution can be installed on any standard or 4X4 vehicle for highly covert on-the-move cellular interception. The vehicle is inconspicuous in common road traffic, outwardly appearing as a private car, service truck or other car. Camouflaged antennas are easily concealed by the vehicle's roof rack or spoiler, easily blending into urban surroundings. In rural settings, when covert operations are not required or longer range interception is needed, a pneumatic mast ensures maximum effectiveness.

Part of the YTS fleet of special operations vehicles, the Cellular Interception Vehicle harnesses 30 years of surveillance experience in real-life operational scenarios. The vehicle can be tailored to meet the specific tactical and strategic needs of each customer. YTS vehicles are in use by Israeli government and security agencies, and in other law enforcement agencies around the world.

Covert and non-covert cellular interception

Customizable to meet tactical and strategic needs

Rechargeable battery bank and Independent energy solution

Passive and active cellular interception

Dual-mode solution

The Cellular Interception Vehicle can operate in covert and non-covert modes. When covert, the vehicle is fully camouflaged, while at the same time enabling almost instantaneous operation from the vehicle itself. When operating in a non-covert mode – with a deployed pneumatic mast to increase the range – the interception capabilities can be fully operational in approximately 30 minutes via the vehicle's Quick Deploy System (QDS).

Fully customizable

As a systems integrator with hands-on expertise, YTS delivers a completely tailored interception solution to meet the operational needs of the individual customer. The vehicle's integration can be completed in YTS facilities or on-site at the client's premises.

Standalone operation

Featuring continuous silent operation on rechargeable batteries for ten hours, the vehicle's extended operation makes it a valuable asset in an overall surveillance strategy.
